

What are the sequence of the task

- ① do-fetch } • tar - xz
- ② do-unpack } ↳ unpack

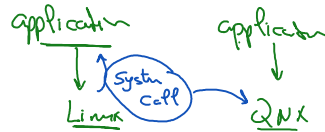

all repo are downloaded
By zip (Not cloned)

↳ WORDER → fetch conf build Image
↳ UNPACK.DIA
↳ S → Inside word/DIA
Unpack source code

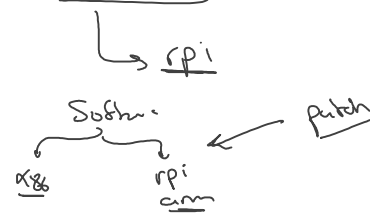

- ③ do-patch
↳ Some lines of code not compatible with current HW

printf()
↳ Linux
↳ Linux-wintel) ↳ OS

Printfc)
↳ QNX
↳ QNX-wintel)

Source Code downloaded

- ④ do-configure → make_menconfy ; cmake -S. -B build [opt]

- ⑤ do-compile → cmake -build build

- ⑥ do-install → package to be installed where exactly rootfs ↳ root

Variable
(D)

- ⑦ do-package

- ⑧ do-populate-sysroot

↳ This optional and depend on a variable Named IMAGE-INSTALL

Install D →

→ /bin/dash → ^{update} do-populate-sysroot

Implement a Recipe

① do-fetch & ② do-unpack

fetch ← SRC_URI = "<schema>:// [Source code] ; protocol ; branch
unpack ←

local file http http github git

Task

① code
 ↳ led on
 ↳ led off } based on switch

② recipe
 ↳ rootfs

③ Image → application

Image support
3 package

bash python tcpdump

To make the package part of
your Image

You need to set variable

IMAGE_INSTALL :append = "- dash"

Output of the Image

build/tmp/deploy/Image/rpi/ ———→
 • wic
 • wic.bz2
 • img
